

## Our Legacy Carries On

With the recent passing of senior engineer, Ward Fiebiger, there is natural question regarding 'what's next'.

Fear not, Audio Research's legacy is strong and poised for a bright future. We have a plan and that plan includes what Ward started and continues beyond with new products and designs.

Audio Research is currently working on several new product designs scheduled to launch over the next several years. New features, new components and new technologies all woven together with our timeless craftsmanship. Ward was working on a new prototype and had all the components neatly laid out awaiting the new circuit boards which were recently delivered. Because of Ward's forethought, Audio Research continues his work without interruption or delay.

### Remembering Ward

Ward's career at Audio Research spanned over 37 years. In 1978, Ward worked in the service department, later moving into Quality Assurance and eventually transferring to engineering where he supported engineers in board layouts and prototyping. Ward had the honor of working side by side with Bill Johnson and other engineers learning from Bill his design philosophy, and absorbing much of the company's DNA. Bill would be proud of the products being produced today.

There are many key product contributions in Audio Research's legacy and work during Ward's tenure, including:

- Reference Anniversary Preamplifier
- Reference 5 Preamplifier
- Reference Phono 2 Preamplifier
- Reference 75, 150, 250, 750 Power Amplifiers
- VSi60 and VSi75 Integrated Amplifiers

Ward will be missed but his work – our legacy, carries on towards a bright future.
